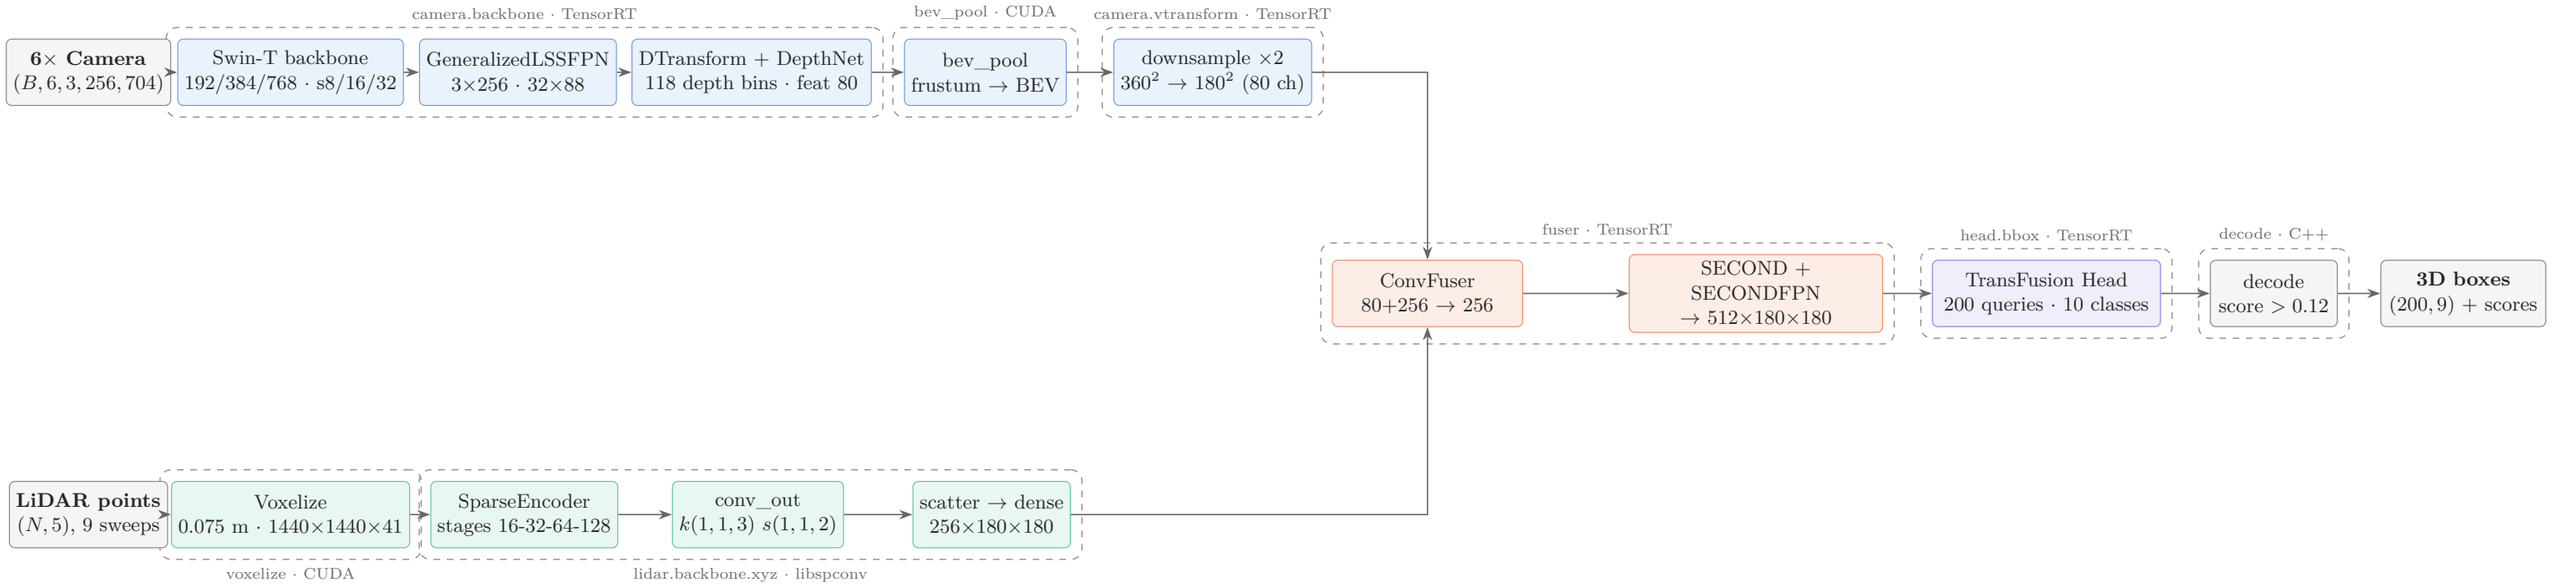
BEVFusion (nuScenes det) — network and deployment partition

camera: Swin-T + DepthLSS LiDAR: SparseEncoder fusion: ConvFuser + SECOND/SECONDFPN



Dashed frames = deployment units. TRT plans: camera.backbone / camera.vtransform / fuser / head.bbox;
SCN runs as a libspconv ONNX engine; bev_pool, voxelize and box decode are C++ CUDA kernels.
BEV: ±54 m, 180×180 output grid; LiDAR voxel 0.075 m; camera input 6×256×704.
